DETAILED ACTION***Election/Restrictions***

Applicant's election with traverse of group II comprising claims 4 – 33 in the reply filed on 21/21/2004 is acknowledged. The traversal is on the ground(s) that a search and examination of all pending claims would not be a serious burden to the examiner due to the availability of powerful electronic search engines. This is not found persuasive because, as discussed in the election/restriction requirement, the inventions are considered independent and distinct, and are restricted appropriately according to the guidelines set forth in MPEP § 806.05(h). Each of the invention groups have a separate status in the art, as shown by their different classifications, and would therefore require different fields of search (see MPEP 803).

The requirement is still deemed proper and is therefore made FINAL.

Information Disclosure Statement

The specification discusses foreign document DE 3815528 C1 and U.S. patent 6,117,687

A. The listing of references in the specification is not a proper information disclosure statement. 37 CFR 1.98(b) requires a list of all patents, publications, or other information submitted for consideration by the Office, and MPEP § 609 A(1) states, "the list may not be incorporated into the specification but must be submitted in a separate paper." Therefore, unless the references have been cited by the examiner on form PTO-892, they have not been considered.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 4 – 33 are rejected under 35 U.S.C. 102(b) as being anticipated by Selfridge et al. (U.S. Pat. No. 4,572,427) (hereinafter “Selfridge”). Selfridge teaches a controlled gas atmospheric incubation apparatus comprising: an inner container or chamber (13); a humidifier (67); urethane insulation (17); a controllable electric heating element (19); and transparent glass doors (14 & 16) (see col. 4, line 16 – col. 12, line 18; figures 1 – 4). Selfridge does teach the utilization of a pan holding a water bath for humidification purposes (see col. 2, lines 34 – 43). Selfridge teaches the incorporation of a microprocessor computer control system (104), which is coupled to various sensors and heaters, for controlling the operation of the incubation apparatus (see col. 9, lines 1 – 17). Selfridge further indicates the incorporation of a door sensor or switch system that is operatively involved in controlling the incubation system (see col. 9, lines 18 – 22). The Courts have held that apparatus claims must be structurally distinguishable from the prior art in terms of structure, not function. See *In re Danley*, 120 USPQ 528, 531 (CCPA 1959); and *Hewlett-Packard Co. V. Bausch and Lomb, Inc.*, 15 USPQ2d 1525, 1528 (Fed. Cir. 1990). The Courts have held that the manner of operating an apparatus does not differentiate an apparatus claim from the prior art, if the prior art apparatus teaches all of the structural limitations of the claim. See *Ex Parte Masham*, 2 USPQ2d 1647 (BPAI 1987) (see MPEP § 2114).

Art Unit: 1743

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. The cited prior art teach various incubation devices.
